

Token TK877BT External Bottom Bracket with Tiramic Bearings £59.99

Cycling
WEEKLY

**HIGHLY
RECOMMENDED**

SOLD on the ceramic-bearing upgrade, offering rounder and harder balls for reduced rolling resistance, Token has taken it one step further and coated its steel races with a super-hard titanium nitride treatment.

Having used the Token Ceramic BB throughout the cross season, racing and jet washing it every weekend, it has taken a lot of abuse but remained running impressively smooth, without seizing or the bearings running dry. The Tiramic bearings have impressed me no end, and at a fraction of the price of some ceramic-bearing bottom brackets. Available in Gold, and Italian or BSA shells. DD
