

**They say:** Two Velcro straps close in opposite directions to ensure a secure fit: the larger strap allows you to tighten the shoes quickly from the outside in once you've mounted your bike. The soft upper was developed to give fast and easy entry and ensure comfort when worn without socks. Glass and carbon fibres in the sole improve rigidity and ensure maximum performance despite the reduced thickness.

**We say:** The large Velcro strap - which can be held open by another piece of Velcro by the inner heel - makes these shoes simple and quick to put on and tighten on the bike. They transfer energy efficiently thanks to the rigid sole and are comfortable even with warm, damp feet thanks to a finger-width gap under the smaller strap for ventilation.
